U. S. Patent and Trademark Office PTO-326 (Rev. 9-97)

Part of Paper No. 20

Application/Control Number: 09/083,150

Art Unit: 1617

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 1-23, 27, 28, 33, 35, 37 are rejected under 35 U.S.C. 103(a) as being unpatentable over Wolf et al. In view of Fanchon et al.

Wolf et al. Teach an anti-acne composition comprising 0.01-25% of a carrier complexed to active (abstract). 40%-50% active to 50-60% carrier is specified (column lines 11-13). Protein and dendritic polymers are specified (column 2 lines 38-42. Column 3 lines 39-40). Emulsions are specified (column 4 lines 42-44). Titanium oxide is specified (column 6 line 34). Stearic acid and Jojoba oil are disclosed (column 5 line 53 and column 6 line 50).

Fanchon et al. Teach anti-anti-acne compositions containing antioxidants and nanopigments as active agents (title, Abstract, column 7 lines 7-9, 11, 13, 29-30).

It would have been obvious to one of ordinary skill to add an antioxidant and nanopigments to the composition of Wolf et al. To achieve the beneficial effect of additional anti-acne actives in view of Fanchon et al.

It would have been obvious to one of ordinary skill to add a EDTA to the compositions of preventing discoloration in view of Garrison et al.

As to the now claimed "effective amount", Wolf et al teaches a percent range of polymer overlapping applicants' claimed ranges (see claims 14-15).

Application/Control Number: 09/083,150

Art Unit: 1617

Applicants' argue that Fanchon teaches only the optional use of nanopigments-in-Fanchon. However, both Wolf et al and Fanchon are anti-aine compositions.

Thus, the beneficial effect of nano pigments as protective agents in Fanchon et al would be known to one of ordinary skill in the art.

Applicants also argue that neither reference teaches the antioxidant property of the claimed polymer however, motivation to combine need not concern applicants' motivation to invention.

No claims allowed.

THIS ACTION IS MADE FINAL. Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.

This application contains claims 29, 31, 36, 37-44 drawn to an invention nonelected with traverse in Paper No. 7. A complete reply to the final rejection must include cancellation of nonelected claims or other appropriate action (37 CFR 1.144) See MPEP § 821.01.

Application/Control Number: 09/083,150

Art Unit: 1617
